A.N.X V1 Platform Document

1. Product Overview

Product Name

The A.N.X V1 Platform

Purpose

The V1 Platform is the first working version of the club/member ecosystem. It is designed to help members register, access their dashboard, attend events, book mentors, view projects, and interact with the club in a structured way.

This V1 should be built as a lean, fast, and production-ready platform using Firebase-first architecture. The goal is not to build every advanced feature immediately, but to launch a stable platform that proves demand and supports real users.

2. Product Goal

The goal of V1 is to create a working platform where:

- Members can create accounts and manage profiles.
- Members can view a personal dashboard.
- Events can be listed and registrations can be collected.
- Membership tiers can be managed.
- Mentorship booking can be handled in a basic way.
- Projects can be showcased publicly.
- Admins can manage members, events, mentors, and submissions.

3. V1 Build Philosophy

The platform should be:

- Lean
- Fast to build
- Easy to maintain
- Mobile responsive
- Firebase-first
- Simple for interns to understand
- Ready for real users
- Scalable enough for the first 1,000+ users

Avoid overengineering in V1.

Do not build advanced AI, gamification, complex internship workflows, or heavy analytics in the first 8 weeks.

4. Target Users

1. Members

Students who join the club/community.

2. Premium Members

Members who take paid membership and receive extra benefits.

3. Mentors

Industry experts or seniors who provide mentorship sessions.

4. Admins

Core team members who manage events, members, payments, mentors, and platform content.

5. Visitors

Non-logged-in users who can view the public website, events, and project showcase.

5. Feature Priority

Feature	Priority	Reason
Member Dashboard	P0	Core utility — members need a home
Event Registration System	P0	Already proven demand
Membership Tier Logic	P0	Revenue depends on this
Mentor Booking Basic	P1	Most-requested feature
Project Showcase	P1	High visibility, builds credibility
Learning Roadmaps	P2	Valuable but can be Notion-based first
Internship Portal	P2	Phase 4 scope
Gamification / XP	P3	Phase 4 scope
AI Features	P3	Phase 5 scope

6. Tech Stack

The tech stack must remain lean, fast, and proven.

```
Frontend:   Next.js 14 (App Router)
Backend:    Next.js API Routes + Firebase Functions
Database:   Firestore (switch to PostgreSQL at 1,000+ users)
Auth:       Firebase Auth (Google + Email)
Storage:    Firebase Storage
Payments:   Razorpay (India-first, UPI support)
Hosting:    Vercel (frontend) + Firebase (backend)
Email:      Resend.com (free tier - 3,000 emails/month)
```

7. Core Modules

Module 1: Authentication & User Profiles

Priority

P0

Objective

Allow users to sign up, log in, and create a basic member profile.

Features

- Google login
- Email/password login
- User profile creation
- Role assignment
- Profile edit option
- Membership status display

User Profile Fields

- Full name
- Email
- Phone number
- College name
- Year/branch
- Skills
- Interests

- LinkedIn URL
- GitHub URL
- Portfolio URL
- Membership type (not needed as of now).
- Joined date

Roles

- Visitor
- Member
- Premium Member
- Mentor
- Admin

Acceptance Criteria

- User can sign up successfully.
- User can log in using Google or email.
- User can edit profile details.
- Admin can view user details.
- Membership status is visible in dashboard.

Module 2: Member Dashboard

Priority

P0

Objective

Give every logged-in member a central home page.

Dashboard Sections

- Welcome message
- Membership status
- Upcoming events
- Registered events
- Mentor booking status
- Recommended roadmaps/resources
- Project participation status
- Announcements

Acceptance Criteria

- Dashboard loads after login.
- Member-specific data is shown.
- Premium members see premium benefits.
- Non-premium members see upgrade CTA.

Module 3: Membership Tier Logic

Priority

P0

Objective

Create free and paid membership access logic.

Membership Types

Free Member

Access to:

- Public events
- Basic community updates
- Basic dashboard
- Public project showcase

Premium Member

Access to:

- Event discounts
- Free/basic mentorship sessions
- Premium roadmaps
- Priority event registration
- Project team opportunities
- Member-only resources
- Certificates and recognition

Features

- Membership plan page
- Razorpay payment integration

- Payment success/failure handling
- Membership activation
- Expiry date tracking
- Admin manual membership update

Acceptance Criteria

- User can select membership plan.
- Razorpay checkout opens correctly.
- Payment success updates membership status.
- Premium features are locked/unlocked based on membership.
- Admin can manually update membership if needed.

Module 4: Event Registration System

Priority

P0

Objective

Allow users to view events and register for them.

Event Types

- Free events
- Paid events
- Premium discounted events
- Member-only events

Event Fields

- Event title
- Description
- Date and time
- Venue/online link
- Speaker/mentor name
- Event type
- Price
- Premium member price
- Registration deadline
- Seats available

- Poster/image

Features

- Public event listing
- Event detail page
- Register button
- Razorpay payment for paid events
- Discount logic for premium members
- Registration confirmation email
- Admin event creation
- Admin registration list

Acceptance Criteria

- Users can view events.
- Users can register for free events.
- Users can pay for paid events.
- Premium members get discount if applicable.
- Admin can create/edit/delete events.
- Admin can export/view registrations.

Module 5: Mentor Booking Basic

Priority

P1

Objective

Allow members to request mentorship sessions.

V1 Scope

Keep it simple. Do not build complex calendar automation initially.

Features

- Mentor listing page
- Mentor profile page
- Request mentorship form
- Topic selection
- Preferred date/time input

- Admin approval flow
- Email notification to member

Mentor Fields

- Name
- Role
- Company/experience
- Skills/domains
- Bio
- LinkedIn
- Available topics
- Profile image

Booking Fields

- Member name
- Mentor selected
- Topic
- Message/question
- Preferred date
- Preferred time
- Status: Pending / Approved / Rejected / Completed

Acceptance Criteria

- Member can request a mentorship session.
- Admin can approve/reject request.
- Member can see booking status.
- Mentor details are visible publicly or to members.

Module 6: Project Showcase

Priority

P1

Objective

Showcase member-built products and club projects to build credibility.

Features

- Public project showcase page

- Project detail page
- Submit project form
- Admin approval system
- Featured projects section

Project Fields

- Project name
- Short description
- Problem statement
- Tech stack
- Team members
- GitHub link
- Live demo link
- Images/screenshots
- Status: Idea / Building / Launched

Acceptance Criteria

- Projects can be submitted.
- Admin can approve/reject projects.
- Approved projects appear publicly.
- Each project has a clean detail page.

Module 7: Learning Roadmaps

Priority

P2

V1 Approach

Use Notion or static pages first. Do not build a complex LMS in V1.

Roadmaps To Include

- Web Development
- AI/ML
- UI/UX
- App Development
- Cloud & DevOps
- Data Science

- Product Management

Features

- Roadmap listing page
- Roadmap detail page
- External Notion/resource links
- Premium roadmap lock

Acceptance Criteria

- Members can view roadmaps.
- Premium-only roadmaps are locked for free members.
- Admin can add/edit roadmap links.

8. Admin Panel Requirements

Admin Features

- View all members
- Manage membership status
- Create/edit/delete events
- View event registrations
- Manage mentor profiles
- Approve/reject mentor bookings
- Approve/reject project submissions
- Add announcements
- View basic platform stats

Basic Stats

- Total users
- Premium members
- Total events
- Total registrations
- Total mentor requests
- Total projects submitted

9. Payment Requirements

Payment Gateway

Razorpay

Payment Use Cases

- Premium membership payment
- Paid event registration
- Mentor session payment if needed later

Payment Flow

1. User selects plan/event.
2. Razorpay checkout opens.
3. User completes payment.
4. Payment success is verified.
5. Firestore record is updated.
6. Confirmation email is sent.

Payment Records

Store:

- User ID
- Payment ID
- Order ID
- Amount
- Payment type
- Status
- Timestamp

10. Email Requirements

Email Provider

Resend.com

Email Types

- Signup welcome email
- Event registration confirmation
- Payment confirmation

- Mentor booking request confirmation
- Mentor booking approval/rejection
- Membership activation email

11. Database Collections

Firestore Collections

users

Stores user profile and membership details.

events

Stores event data.

eventRegistrations

Stores event registration records.

memberships

Stores membership payments and expiry.

mentors

Stores mentor profiles.

mentorBookings

Stores mentorship requests.

projects

Stores project showcase submissions.

announcements

Stores dashboard announcements.

payments

Stores payment records.

12. Development Timeline (Expected)

Week	Focus
Week 1–2	Auth, member profiles, dashboard skeleton
Week 3–4	Event system, Razorpay integration
Week 5–6	Mentor booking basic, calendar/request flow, Razorpay if needed
Week 7	Project showcase, member directory
Week 8	QA, bug fixes, launch preparation

13. Team Allocation

Frontend Team

Responsible for:

- Landing page
- Dashboard UI
- Event pages
- Mentor pages
- Project showcase
- Responsive design

Backend Team

Responsible for:

- API routes
- Firestore structure
- Firebase Functions
- Razorpay verification
- Role-based access

AI/Automation Team

V1 responsibility should be limited to:

- Email automation support
- Basic recommendation logic if time allows
- Documentation automation

AI features should not block V1 launch.

QA Team

Responsible for:

- Testing every flow
- Mobile testing
- Payment testing
- Form validation testing
- Admin panel testing

14. What Should NOT Be Built in V1

Avoid these in the first 8 weeks:

- Full AI roadmap generator
- Advanced RAG system
- Complex internship portal
- Full LMS system
- Chat system
- XP/gamification engine
- Advanced analytics
- Mobile app
- Complex mentor calendar sync
- Multi-college hierarchy

These can come after V1 launch.
